

Quality Assurance and Improvement Initiatives

Exemplifying best practices,
building a progressive
organization

Customers come to ENSCO, Inc. for mission critical expertise and innovation. To keep pace with their needs, ENSCO has adopted a progressive approach to quality oversight – one truly tailored to meet business and operational objectives. Our quality management processes fully align with current international standards and industry best practices. But they also support a corporate culture that encourages ingenuity in order to meet and exceed customer expectations. At ENSCO, we maintain that this balanced approach offers best value for our customers and sustained growth for our business. And as ENSCO continues to grow, so too will career opportunities for our employees.

The benefits of standardized quality processes

ENSCO understands that quality improvement requires a set of stable and repeatable processes that must be defined, implemented, measured and controlled. We also recognize that the most valuable advances take place in a work environment where there is freedom to innovate. ENSCO offers employees a workplace where interesting technical problems are solved in a supportive operational setting that provides the best overall solution to the customer.

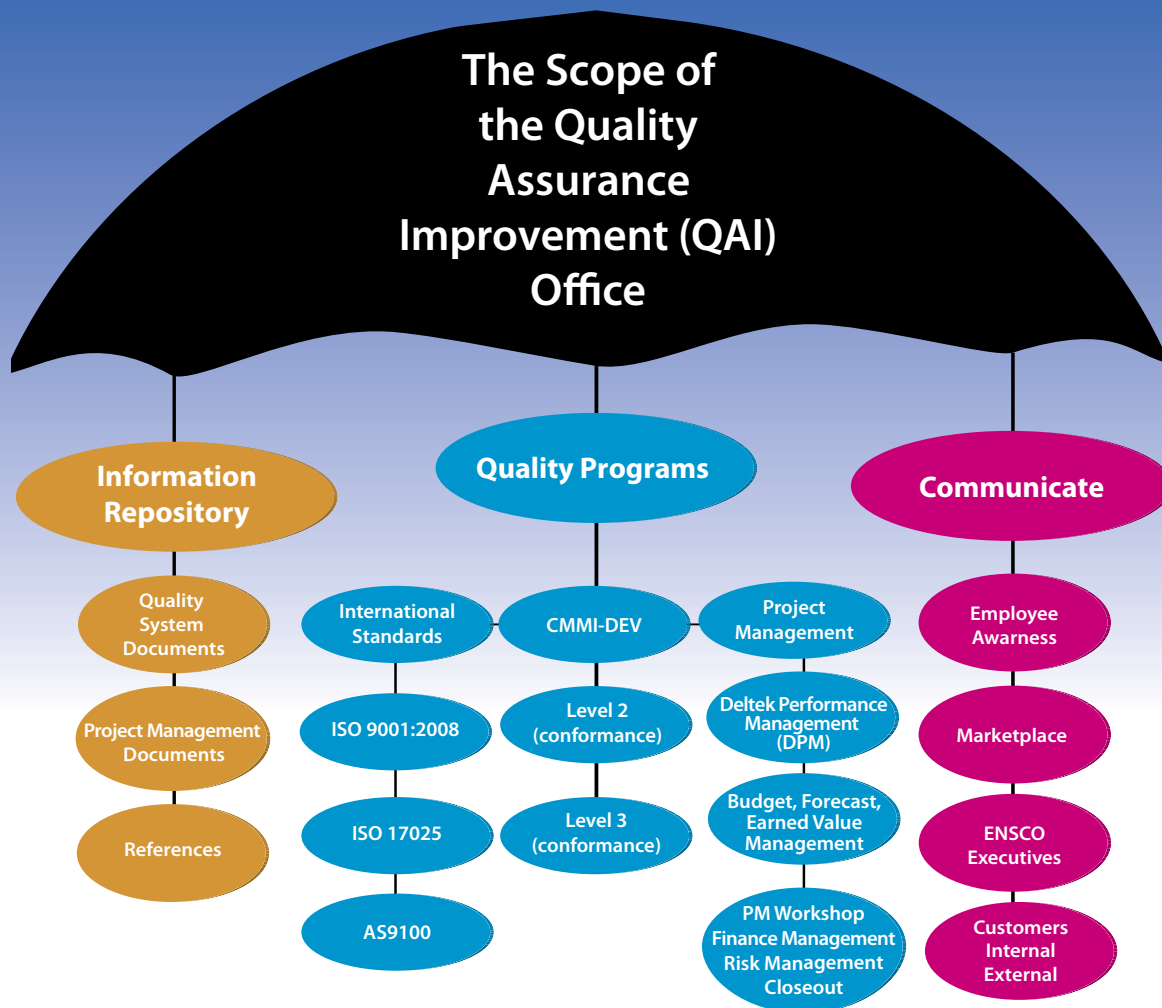

Quality partnerships

As a company with consistent organizational quality and evidence-based practices, ENSCO is able to work with discerning partners and customers that require impeccable technical leadership. Our approach is to remain nimble within our dynamic industries and areas of expertise while fully committed to quality assurance. Our reliable and consistent delivery makes us a partner of choice.

Stable, robust infrastructure

ENSCO's Quality Assurance and Improvement Office and Project Management Office support our programs and projects, resulting in quantifiable results for our customers, efficient use of resources and a healthy work-life balance.

Quality Assurance and Improvement (QAI) Office

The QAI Office was chartered with the full support of our senior management team, as a means of providing the best working environment for employees and a superior end result for customers. The QAI Office provides a central repository for our quality-related programs to ensure innovation, efficient implementation and accountability across all levels of the company. This office is the central source for the promotion and development of new, strategic, quality related initiatives.

Project Management Office (PMO)

The PMO is an enterprise-wide entity that operates under the auspices of the QAI Office. Led by a certified Project Management Professional (PMP) and experienced operational ENSCO program manager, this office coordinates the integration of the proven standards and methods of the Project Management Institute throughout ENSCO. By tailoring these best practices to the ENSCO culture, qualified project managers direct well-organized teams to guarantee operational and project efficiency as well as technical success.

ENSCO continues to align its efforts with internationally recognized standards or models including Capability Maturity Model Integration for Development (CMMI-DEV), Aerospace (AS) and International Organization for Standards (ISO). ENSCO division certifications include:

- ISO 17025
- AS9100
- ISO 9001:2008
- DO-178B
