

Counter-UAS Training

Small Uncrewed Aerial Systems (sUAS) can pose a serious threat to organizations and facilities and can no longer be ignored.

ENSCO offers a collection of Counter-Unmanned Aerial Systems (C-UAS) training courses to enable informed decision making from the C-Suite to the operators of organizations concerned with the rapidly maturing threats posed by sUAS.

KEY FEATURES

Training at our facility in Colorado Springs or mobile training for up to 50 students at your location

All courses are ASIS International Continuing Professional Education (CPE) certified

All courses are instructor led by seasoned C-UAS professionals with over 70 years of combined experience

Instruction reinforced through a variety of practical exercises and live locations to conduct the capstone exercise

STRATEGIC IMPORTANCE:

Our C-UAS courses provide professionals with the knowledge and frameworks needed to incorporate the air domain into comprehensive security programs and make informed technology decisions. Our instructors are passionate about security and provide engaging, hands-on instruction to educate participants on this evolving risk. Security, safety, emergency management, and IT professionals must consider the “air domain” in plans, policies, and standard operating procedures. “We can no longer afford not to look up!”

Executive Leadership Presentation

A leadership-focused, detailed introduction that fosters an essential understanding of the C-UAS ecosystem, the challenges of mitigating the threat, and why decisionmakers should support “air domain” security and safety programs.

Drone Emergency Response Plan (DERP) - 20 CPEs

The knowledge gained in this course builds upon the structure of the DVRA to empower participants to design emergency plans based on identified threats and vulnerabilities to a drone intrusion.

Introduction to C-UAS and Law - 12 CPEs

This is a fast-paced foundational course that introduces the fundamental knowledge needed to understand Counter Unmanned Aerial Systems (C-UAS), including current United States law and legislation.

Left of C-UAS (DRONE) Launch (LODL) - 20 CPEs

This course offers the next evolution in C-UAS security by transitioning the DERP into a preemptive plan designed to respond to a likely adversarial drone event. It builds upon the previous frameworks by including proactive mitigation measures.

Drone Vulnerability and Risk Assessment (DVRA) - 28 CPEs

This course provides the knowledge required to conduct a DVRA, offers a structured and actionable approach to the assessment, and reinforces these concepts through a comprehensive hands-on practical exercise.
